

Stand 2944 at Windpower 2008

#### Tentec Launch New Bolt Tensioning Tools for Wind Power Generation

Tentec, a leading UK designer and manufacturer of bolt tightening equipment, is pleased to announce the launch of the new Aero series of Bolt Tensioning Tools for Wind Power Generation. This new range will be on show on Stand 2944 at Windpower 2008, June 1st - June 4th Houston, Texas.

The Aero range comprises bolt tensioning tools suitable for a complete wind turbine bolting installation or maintenance programme on many different types and models of wind turbines. By listening to customer requirements these feature rich, powerful bolt tensioning tools are packed full of operator requested features including quick release swivel fittings, automatic piston reset and intuitive operation. The products are manufactured from aircraft quality high-strength tensile steel and are compact and lightweight for ease of handling. The range is already in use by one of the major wind turbine manufacturers in Spain.

"Having supplied many different industries with bolt tightening equipment, we know just what the engineer is looking for." explains Paul Egginton, Engineering Director. "Here at Tentec, we have designed this new equipment to be technically excellent, fail-safe and commercially attractive. We aim to provide our customers with a fast and efficient service and understand that the 4-6 week turnaround time offered by many of our competitors is unacceptable and often detrimental to our customers' business."

This new range is aimed at manufacturers of wind turbines, installation companies and subcontractors, as well as specialist service companies.
